

NEWLY SEEDED LAWN CARE

Watering – Keep the top inch of soil consistently moist – water once in the morning and again later in the day if needed

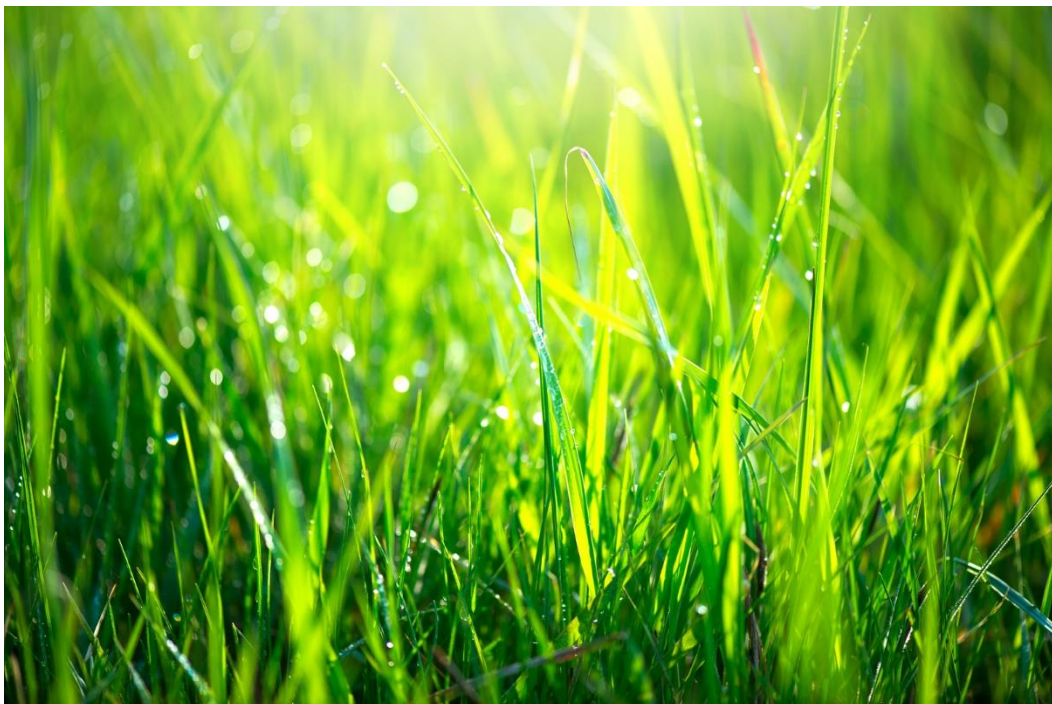

Mow after grass reaches 3-4 inches tall and cut back watering to 2-3 times per week but increase length of watering time to encourage deeper root systems.

Weed Control – Wait until you've mowed your new grass at least 4 times before you treat the weeds with weed-control products. Keep the mowed length at 2.5-3" to prevent weed growth.

Your lawn should be fully established within the first year.

Established lawn tips:

- Keep your blades sharp!
- Change up your mowing pattern
- Mow frequently
