

# WINTER HOME MAINTENANCE

## Interior

- Check and replace furnace filter
- Reverse Ceiling Fans (ceiling fans should run clockwise in winter)
- Clean all windows inside & out. Clean windows allow the sunlight to help warm your home.
- Prevent ice dams by insuring your attic has adequate insulation

## Outdoor

- Disconnect your garden hose from the outside faucet and turn water off to prevent frozen pipes
- Check for air leaks around windows and doors, including cracks in caulking or weather stripping and replace if necessary.
- Get your snowblower and shovels ready. Change the oil and sparkplugs in the snowblower if needed
- Extend the life of your patio furniture by covering or storing for the winter
